Dynamics GP 2010 Reporting enhancements

Feature	Explanation	Benefits
NEW management reporter	New Management Reporter which will replace Frx for General ledger reporting	Modern user friendly interface with functionality above that offered by Frx although still retaining the same reporting concepts.
Predictive Modelling And Analysis with Excel	Tools integrating to Excel include the Excel Reports which now have are additional ways to use them including Power Pivot tables and drill-back from Excel Reports to GP	Better Management information
Additional SQL reporting services Reports	Over 90 SRS reports are included that can be used via a web browser, SharePoint, Outlook or within the dashboards .	Improved out of the box reporting
Customisable Dashboards And KPI's With Drill-Back	There are now customizable dashboards built of SQL Reporting Services (SRS) reports. Each user can decide which ones they want to display, create their own and drill-back to GP from these reports.	Get Better Insight Into Your Data Using Dashboards And KPI's With Drill-Back

Dynamics GP 2010 Security enhancements

Feature	Explanation	Benefits
Remember user and company	Microsoft Dynamics GP 2010 has options for a user to initially log in, and have the application automatically log them in to Microsoft Dynamics GP and their company at future logins.	This option also speeds up login time for users and helps administrators who are often overwhelmed with password reset and administration issues.
Copy user security settings	Additional functionality to simplify the process of setting up an individual's security access.	Use the Copy User Security window to copy one user's security settings to another saving time and ensuring common feature set
Display options for security	New display options are available In the security windows, a user no longer needs to scroll through the complete list of items to see which have been selected	Increases efficiency for the System Administrator as they assign security access to users

Dynamics GP 2010 System enhancements

Feature	Explanation	Benefits
Lookup Default Views	Views can be set as the default view for lookups, and the next time the lookup window is opened, it will use the assigned default view	enable quicker access to information for users. Also, options to restrict inactive records have been added to lookup windows .
Right Click functionality	Right-click menu functionality has been added in a number of places within Microsoft Dynamics GP.	This takes advantage of functionality quite familiar to most computer users.
Navigation Pane changes and enhancements	User can hide the navigation pane if the module is registered but is not selected in the Registration window	creating a better user experience
Additional Report Printing Options	The Report destination window allows a user to select Standard, which uses the Report Writer engine or Template, which uses Microsoft® Word as the layout engine.	These new options provide increased flexibility when printing and generating reports in Microsoft Dynamics GP
Home Page Cues	Cues can be used instead of text for Reminders on the Home Page. A cue is an icon that increases or decreases in size as the number of records in a particular reminder category changes i.e. overdue invoices	creating a better user experience with visual cues
Microsoft Dynamics Online Connect	The home page in Microsoft Dynamics GP hosts a new Microsoft Dynamics Online Connect section that makes the benefits of the Microsoft Dynamics Business Ready Enhancement Plan (BREP) easy to find and access.	The slides provide links to perform self-help support, get product related information, and access training all from the Microsoft Dynamics GP home page
Unified Communications capabilities	Communication with vendors, customers and employees from Microsoft Dynamics GP 2010 is possible through instant messaging, email, and direct phone calls using Microsoft® Office Communicator	Communication options with business contacts are enhanced in Microsoft Dynamics GP with this new integration with Office Communicator

Dynamics GP 2010 General Ledger enhancements

Feature	Explanation	Benefits
Clearing recurring batch transactions	If a recurring batch is entered and posted, the batch distribution lines can be cleared, and the amounts posted to accounts can be changed for the next posting of the recurring batch	saves time on recurring transactions
Budget Transactions	Budget Transaction Entry allows you to enter budget transactions and post them like regular transactions .	allowing budget transactions provides a transactional based history of modifications to budgets
Combine Budgets	Combining multiple budgets is now possible with Microsoft Dynamics GP 2010	helpful when multiple departments in an organization create their own budgets, and it is necessary to consolidate them into one budget.
Reporting Ledgers	includes features that meet compliance standards for International Financial Reporting Standards (IFRS).	You can use multiple reporting ledgers and identify transactions for local Generally Accepted Accounting Principles (GAAP), IFRS, or other accounting purposes
Transaction Dimension Code Security	The Analytical Accounting On The Fly security option will enable users to have access rights to a transaction dimension they have added	saves time when creating transaction dimension codes

Dynamics GP 2010 Payables and Receivables enhancements

Feature	Explanation	Benefits
Excluding Expired Discounts	A new setup option is available that allows you to exclude expired discounts from payments when using the Select Payables Checks functionality	reduce the volume of individual editing of checks using the Edit Payables Checks window
Select Checks Options	Additional flexibility has been added in the selection process when using the Select Payables Checks window you can select multiple ranges of suppliers/vendors .	reduce the volume of individual editing of checks using the Edit Payables Checks window
Recurring Cash Receipt Batches	can create a cash receipts batch and assign it to a recurring batch type	speeds up data entry and reduces the risk of data entry errors.
Negative Cash Receipts	cash receipts may now be entered as a negative currency value .	saves time entering transactions
